
Textured Bottom

Unlike other manufactures that use unattractive and gritty inserts that are difficult to keep clean and unpleasant to the touch, particularly on more sensitive areas of the body, MTI's textured bottom is thermoformed into the product, reshaping the floor to create a smooth pebble-like surface that is comfortable and easy to clean.

This surface is compliant with ASTM C 1025-07 coefficient of friction test.

Though cast acrylic is inherently slip-resistant, all of MTI's gloss acrylic shower bases come standard with MTI's textured bottom. Our MTI Solutions acrylic bathtubs come standard without a textured bottom, but can be added as an option.

This option must be included on the order, as it is part of the product's formation process.

Textured Bottom (TXTBTM) \$115

Offered on most MTI Solutions Collection tub models.

See Options section on product specification sheet for availability.
